PROJECTS

Smart School Management System — Final Year Project

2025 – 2026

A full-stack school management platform built for a basic school, covering students, teachers, parents, attendance, results and report cards.

- Designed and built a role-based web platform (PHP, MySQL, HTML, CSS, JavaScript) supporting separate Admin, Teacher and Parent portals.
- Implemented secure authentication with hashed passwords, SQL-injection-safe prepared statements, and protected file uploads.
- Built an automated admission system with auto-generated admission numbers and automatic parent account creation.
- Developed a flexible class/subject/teacher assignment system and an attendance & results module with automatic grade calculation and printable, school-branded report cards.
- Designed a simplified, accessible parent portal interface for users with limited digital literacy.

E-Commerce Website —

- Designed and developed a functional e-commerce website with product listings and a working purchase/checkout flow, applying responsive design principles for usability across devices.
